Ayaan Hydross Sameer

Full-Stack Developer I Systems & Data

Doha, Qatar | +974 3327 2702 | ayaansameer.002@gmail.com
linkedin.com/in/ayaan-hydross-sameer | Portfolio: **ayaansameer.github.io**

PROFESSIONAL SUMMARY

Full-stack developer and Information Technology graduate (B.Tech) based in Doha, Qatar. Lead developer of Agricope POS, a multi-tenant point-of-sale platform for shops and restaurants, built for commercial use with React, TypeScript, Node.js and PostgreSQL. Previously designed, built and deployed internal business systems at Noble House Trading & Services, including a queue and ticketing system in daily use at two branches, and managed product and stock data in Cin7 Omni. Uses Figma extensively for system and workflow design. Seeking roles in Software Development, Application/Systems Support, IT Support or Business Analysis.

SKILLS

Languages & Frameworks: TypeScript, JavaScript, React, Node.js, Fastify, PHP, HTML, CSS, Tailwind CSS, Vite, Python (basic), Java (fundamentals)

Databases: PostgreSQL, MySQL, SQLite, SQL

Cloud & DevOps: Docker, Railway, Cloudflare Workers, Neon, cPanel, Git, GitHub, CI/CD, pull-request workflow

Testing: Vitest (unit tests), Playwright (end-to-end tests), API integration testing

Design: Figma (UI design, design systems, user flows, workflow diagrams)

Systems & Data: Cin7 Omni, Microsoft Excel (pivot tables, data cleaning), Power BI, data entry and validation

IT & Networking: TCP/IP, DNS, DHCP, LAN/WAN, Windows OS, system troubleshooting

Tools: AI-assisted development (Claude), Microsoft Office, Google Workspace

Core Strengths: Requirements gathering, problem solving, communication, customer service, teamwork, attention to detail

WORK EXPERIENCE

Lead Developer, Agricope POS — Aug 2026 – Present

Agricope LLC | Doha, Qatar

Multi-tenant point-of-sale platform for shops and restaurants in Qatar, built for commercial use.

Tech: React, TypeScript, Vite, Node.js (Fastify), PostgreSQL, Docker, Railway, Cloudflare, Vitest, Playwright, Figma

- Designed and built the platform end to end in 17 phased releases: catalogue, register and split payments, receipts and barcode scanning, customers and credit accounts, shifts and cash drawer, discounts with manager approval, restaurant tables and tabs, and a kitchen display system (KDS).
- Architected multi-tenancy so one deployment serves many businesses, each with its own branches, staff, catalogue and data, plus a platform console for onboarding new businesses.
- Built offline selling: the till keeps trading from a cached catalogue when the connection drops, queues each sale with a provisional number and syncs it to the server when back online.
- Secured access with a two-step sign-in (business login, then 4-digit staff PIN), role-based permissions, hashed passwords and PINs, short-lived tokens and rate limiting.
- Kept money exact: decimal amounts end to end, one shared pricing module for the app and API, server-side pricing and locked database transactions for every payment.
- Implemented the Figma redesign across every screen, with a multi-device layout system for phone, tablet and laptop tills; delivered owner-requested features such as partial refunds, receipts to WhatsApp, an activity log and an archive.
- Deployed to production (API in Docker on Railway, PostgreSQL on Neon) with nightly backups and a restore drill; lead a team of three through dev and production branches, pull requests and CI running **430+ automated tests**.

Systems Coordinator & Data Entry

Jul 2026 – Oct 2026

Noble House Trading & Services | Doha, Qatar

Supplier of school uniforms and PE kit to international schools in Qatar and the region.

Product and Stock Data | Cin7 Omni, Excel

- Maintained product, SKU, size, pricing and stock records in Cin7 Omni for a multi-school range of uniforms, PE kit, swimwear and accessories, keeping data consistent across schools, branches and alternate product codes.
- Cleaned and consolidated a **7,500+ SKU** stock file covering **18 schools** into **600+ unique products**, and cross-checked 350+ brochure codes against the master stock data.
- Prepared clean data extracts from Cin7 Omni and Excel for reporting and for the company's internal systems.

Internal Systems Development | Figma, PHP, MySQL, Node.js, React, PostgreSQL

Owned each project end to end: gathering requirements from staff and management, designing screens, system components and workflows in Figma, defining business rules, building with AI-assisted development (Claude), testing, deployment and ongoing support.

- Used Figma extensively across every internal system: screen layouts, reusable interface components and the queue system's TV display were designed and agreed with staff before any build, and operational workflows (ticket journey, Personal Shopper assignment, delivery jobs) were mapped to settle business rules with management.
- **Queue and Ticketing System** (PHP, MySQL, JavaScript, cPanel), in daily use at two branches: replaced manual queuing in peak sales periods with reception ticketing, department routing, counter calling and a TV display with audio alerts.
- Designed its automatic Personal Shopper assignment engine (longest-idle first, configurable cooldowns), On/Off Desk presence tracking, a supervisor console, and role-based access for six staff roles.
- Built its admin reporting suite: staff performance by department, date-range drill-downs, day-versus-day comparison and hourly-to-monthly service-time graphs with auditable outlier exclusion; ran two builds from one codebase with separate live databases.
- **Customer Service System** (Node.js, React, Tailwind CSS, PostgreSQL): logged, tracked and resolved customer enquiries and orders, with a mobile driver screen and a controlled GitHub release process.
- Also built a task management system, a shared shopping-list app used on up to **20 devices** at once, and stock mapping tools (Node.js, SQLite) used to plan the split of stock across a new second location.

Freelance Web Designer and Front-End Developer

Feb 2025 – Mar 2026

Self-employed | Doha, Qatar

- Designed and built responsive websites in HTML, CSS and JavaScript, tailoring layouts to each client's requirements.
- Worked directly with clients to understand their business needs and turn them into suitable web solutions.
- Maintained and updated site content and functionality after launch, troubleshooting and resolving issues.

PROJECTS

Live Sign Language Translator

Dec 2023 – May 2024

Tech: React, PHP, SQL

- Developed a two-way communication app that lets sign-language and non-sign-language users talk to each other.
- Implemented webcam-based recognition that converts hand gestures into text in real time, and a text-to-sign feature driven by a database of hand-sign images.

EDUCATION

Bachelor of Technology (B.Tech), Information Technology | Cochin University of Science and Technology (CUSAT), Kochi, India

Higher Secondary Education (Class XII) | MES Raja Residential School, Kallanthode, India

Secondary Education (Class X) | Birla Public School, Doha, Qatar

LANGUAGES

English (Fluent), Malayalam (Fluent), Hindi (Conversational)
